Docket Number: 23085-08287

## We Claim:

- 1 1. An apparatus for injecting dry powder comprising:
- 2 a container;
- means for creating an aerosol of the dry powder within the container;
- a conduit at the upper portion of the container having an inlet end and a discharge end,
- 5 wherein the inlet end comprises an ejector and introduces a pressurized gas into the container
- and the discharge end is bifurcated wherein one portion connects to the ejector and the other
- 7 portion discharges the aerosol of the powder; and
- 8 a shaker for shaking the container vertically.
- 1 2. The apparatus of claim 1, wherein the pressurized gas is helium or argon.
- 1 3. The apparatus of claim 1, wherein the ratio of diameter of the ejector to the inlet is about 0.25
- 2 to about 0.9.
- 1 4. The apparatus of claim 3, wherein the ratio is about 0.4 to about 0.6.
- 1 5. The apparatus of claim 1, wherein the dry powder comprises a metal catalyst supported on a
- 2 powdered oxide substrate wherein the powdered oxide substrate has a particle size of 0.5 μm to 5
- 3 um.
- 1 6. The apparatus of claim 5, wherein the shaker comprises a vibrator, two or more vertical bars
- 2 extending upwards from the vibrator, a horizontal bar in between the vertical bars, and a spring
- 3 on one or more of the vertical bars, wherein the container is placed on top of the vibrator and in
- 4 between the vertical bars, and the electromagnet acts to shake the container vertically.
- 7. The apparatus of claim 6, wherein the spring is located immediately below the horizontal bar.
- 1 8. An apparatus for injecting dry powder, the apparatus comprising;
- 2 a first end;
- 3 an end opposite;
- an ejector located between the first end and the end opposite; and

Docket Number: 23085-08287

5 aerosolized dry powder confined between the ejector and the end opposite wherein

6 pressured gas is introduced through the first end, and the end opposite is bifurcated wherein one

- 7 portion discharges the aerosolized powder and the other portion loops back and connects to the
- 8 ejector.
- 1 9. The apparatus of claim 8, wherein the pressurized gas is helium or argon.
- 1 10. The apparatus of claim 8, wherein the first end comprises a tube.
- 1 11. The apparatus of claim 10, wherein the tube is composed of a material selected from the
- 2 group consisting of glass, plastic, ceramic, and metal.
- 1 12. The apparatus of claim 11, wherein ratio of diameter of the tube to the ejector is about 1.1 to
- 2 about 4.
- 1 13. The apparatus of claim 12, wherein the ratio is about 1.6 to about 2.5.
- 1 14. The apparatus of claim 8, wherein the dry powder comprises a metal catalyst supported on a
- 2 powdered oxide substrate wherein the powdered oxide substrate has a particle size of 0.5 μm to 5
- $3 \mu m$ .
- 1 15. An apparatus for injecting dry powder, the apparatus comprising;
- 2 a first end;
- 3 an end opposite;
- an ejector located between the first end and the end opposite; and
- 5 a container comprising means of creating an aerosol of the dry aerosolized dry powder
- 6 located between the ejector and the end opposite wherein the container is shaken vertically using
- 7 a shaker comprises a vibrator, two or more vertical bars extending upwards from the vibrator, a
- 8 horizontal bar in between the vertical bars, and a spring on one or more of the vertical bars,
- 9 wherein the container is placed on top of the vibrator and in between the vertical bars, and the
- spring acts to shake the container vertically, and
- wherein pressured gas is introduced through the first end, and the end opposite is
- bifurcated wherein one portion discharges the aerosolized powder and the other portion loops
- back and connects to the ejector.

Docket Number: 23085-08287

- 1 16. The apparatus of claim 15, wherein the first end comprises a tube.
- 1 17. The apparatus of claim 16, wherein the tube is composed of a material selected from the
- 2 group consisting of glass, plastic, ceramic, and metal.
- 1 18. The apparatus of claim 16, wherein ratio of diameter of the tube to the ejector is about 1.1 to
- 2 about 4.
- 1 19. The apparatus of claim 15, wherein the ratio is about 1.6 to about 2.5.
